Backend Software Engineer with 3+ years of experience building scalable APIs, real-time systems, and data-driven platforms. Specialized in Python, distributed systems, and high-performance backend architecture, using Python, Django, PostgreSQL, Redis, Kafka, Docker, and AWS.

Professional Experience

Software Developer Engineer (SDE) March 2023 - Present
Learn Basics (Lighting Bees Private Limited)
Software Developer Intern Aug 2022 – Mar 2023

- Led a **six-developer engineering team** to deliver a distributed examination platform and real-time collaborative CMS supporting **10+ concurrent users**. Built a **Redis-backed job queue** across 5+ servers and multiple cloud providers, processing **10,000+ images daily**; trusted by **15+ schools**.
- Designed a smart print and scan platform handling **1,000+ print jobs daily** across **8 printers**, using custom scheduling to eliminate manual routing and events from **4 serial-connected scanners** to automate document tracking.
- Maintained **sub-minute lag** for PostgreSQL replication, strengthening database availability. Implemented **MinIO replication** with disaster-recovery procedures to improve data durability and recovery readiness.
- Built an **adaptive worksheet recommendation engine** supporting a **5,000-student program**. A tested **1,000-answer-sheet batch** completed analysis within **2 hours** and generated and printed personalized remedial worksheets within one additional hour, reducing end-to-end turnaround from one working day to **3 hours**.
- Optimized **PostgreSQL queries** through query rewrites, indexing, caching, and execution-plan analysis, reducing **API response time by 50%** across critical workflows.
- Owned **production infrastructure**, including server maintenance, workload distribution, scaling, monitoring, alerting, and **Docker-based CI/CD**, enabling one team production deployment per workday in **under 15 minutes**.
- Built an **automated LaTeX document pipeline**, replacing manual PowerPoint/Word workflows and improving PDF generation performance by **10**× with scalable distribution through **Amazon S3**.
- Developed **event-driven backend integrations** to synchronize Overleaf, SharePoint, Excel, and LMS data into a centralized **PostgreSQL database**.

Projects

1. **Greed & Fear** – **Internal Stock Market Intelligence Tool**
   - Built an internal market-intelligence platform used by **6+ users daily** for live stock dashboards, screening, market sentiment, and portfolio tracking.
   - Engineered **Celery and Redis background workers** to fetch real-time stock data from BSE India, Moneycontrol, and multiple market sources.
   - Developed historical analysis, alerts, and report/export workflows using **Python, Django, FastAPI, and PostgreSQL**.
   - Containerized application services and background workers with **Docker** for reliable deployment and operation.

Skills

- **Languages:** Python, LaTeX.
- **Frameworks:** Django, FastAPI
- **Databases:** PostgreSQL, Redis, MySQL
- **Cloud & DevOps:** Docker, AWS (EC2, S3), CI/CD, MinIO
- **Messaging:** Kafka, WebSockets
- **Tools:** Git, GitHub, GraphQL, PgAdmin4

Education

Bachelor of Engineering (Electronics & Communication Engineering) 2019 – 2023 | CGPA: 7.61/10
Yenepoya Institute of Technology, Mangalore, India
